

U.S.S.N. 09/174,804

- 2 -

WLI 0104 R

**In The Claims:**

Kindly substitute the following for pending claim 78.

91/78. (Amended) A head for a lacrosse stick,  
comprising:

an open frame having a base with a concave interior  
surface defining a ball rest, a pair of sidewalls diverging from  
said base and a lip interconnecting said sidewalls remotely of  
said base;

a plurality of apertures carried by said frame for  
securing a lacrosse net along a back side of said frame,  
leaving the front side of said frame open for receiving a  
lacrosse ball;

a socket extending from said base for attachment of a  
handle so as to define a handle/head axis, said socket having  
an upper surface defining a plane parallel to said handle/head  
axis;

at least a portion of said front side of said sidewalls,  
located within a half of the lengths adjacent said base, being  
offset below said plane and at least a portion of said back side  
of said sidewalls located within the other half of their lengths  
remote from said base extending upwardly toward said front  
side of said sidewalls.

Kindly add the following additional claims:

98/83. (New) A lacrosse head comprising:  
an open frame having a base with a concave interior  
surface defining a ball rest;

WLI 0104 R

a pair of sidewalls diverging from said base and a lip interconnecting said sidewalls remotely of said base;

a plurality of apertures carried by said frame for securing a lacrosse net along a bottom side of said frame, leaving a top side of said frame open for receiving a lacrosse ball;

a socket exteriorly projecting from said base for attachment of a handle so as to define a handle/head axis, said base having a top edge adjacent said socket for defining a plane parallel to said handle/head axis; and

said front side of said sidewalls curving generally downwardly to a point below said plane, said curving beginning adjacent said base.

100, 84. (New) A head for a lacrosse stick, comprising:  
an open frame having a base with a concave interior surface defining a ball rest;

a pair of sidewalls extending from said base, and a lip interconnecting said sidewalls remotely of said base;

a plurality of apertures carried by said frame for securing a lacrosse net along a back side of said frame, leaving the front side of said frame open for receiving a lacrosse ball; and

a projection extending from said base for attachment of a handle so as to define a handle/head axis, said projection having an upper surface which defines a plane parallel to said handle/head axis;
